

Privacy policy

VaultSentinel Local Execution Bridge — browser extension

Last updated: 4 August 2026

This policy covers the **VaultSentinel Local Execution Bridge** browser extension. It does not cover the VaultSentinel platform or any other VaultSentinel software.

The extension collects no personal data, stores nothing on disk, and sends nothing to VaultSentinel or to any third party.

What the extension does

The extension passes messages between the VaultSentinel web application at <https://app.vaultsentinel.com> and VaultSentinel companion software installed on the same computer, and returns the responses to that web application. That is its only function.

Data we collect

None. The extension does not collect, transmit or sell: personally identifiable information; health information; financial or payment information; authentication information; personal communications; location; web history; user activity; or website content.

Data the extension handles while you use it

When you connect the extension to the companion software, it holds that connection state in the browser's session storage, in memory, for the current browser session only. It is not written to disk and is discarded when the browser closes; you reconnect after a restart.

While relaying, the extension passes short-lived identifiers between the web application and the companion software on your computer. These are not retained by the extension and are not sent anywhere else.

Where data goes

Only between two places, both of which you already control: the VaultSentinel web application in your browser, and VaultSentinel companion software on the same computer. The extension makes no connection to any remote server. It contains no analytics, no telemetry and no advertising or tracking technology, and it sets no cookies.

Site access

The extension runs only on <https://app.vaultsentinel.com>. It has no access to any other website, tab, or browsing history. On that one site it exchanges messages with the application; it does not read or modify the content of the page.

Code

All code is contained in the published extension package. The extension loads no remote code and executes none.

Children

The extension is a business tool supplied to organisations under a subscription and is not directed at children.

Changes

Material changes will be published on this page with a revised date, and the Chrome Web Store listing disclosures will be updated to match.
